

The amazing little devices that bring your sound alive

You'll notice the difference the instant you turn on the music. When positioned correctly upon a speaker or PC board*, Harmonix tuning bases bring your sound alive. They greatly improve overall bass response, mid-range definition and dynamic range. By redistributing mechanical vibration, the bases boost mid-range transients, and eliminate much of the nasal, metallic noise sometimes found even in high-end speakers. Placing the bases around the tweeter reduces treble grain, increases purity of sound, and produces more space and transparency. And you'll love the three-dimensional widening of the sound stage.

RF-57 MKII Tuning Base

Boosts mid-range transients and stereo depth.

- (10mm dia. x 2mm) Set of 8
